Abstract (en)
[origin: DE102008039846B3] The fin (1) has a fin head (2) and a fin blade (3), which are rigidly interconnected in a positive manner by a pin i.e. shear pin (4), arranged in boreholes (14, 15, 23) of the fin head and the fin shaft. The pin has predetermined breaking points (27, 28). The fin head and the fin blade comprise recesses (11, 12', 13') and projections (12, 13, 22), which are adapted to each other. The predetermined breaking points are provided in transition regions between the recesses and the projections. A centering projection (17) is formed between the fin head and the fin blade.
