Abstract (en)

[origin: WO2010037743A2] The invention relates to a ship's propulsion (3) having at least one transmission unit (4, 204) fixedly arranged in the ship's hull (6) and a drive unit (5, 205) which is located outside of the hull and can be pivoted about a control axis (10, 110, 210, 310, 410) by a controller (200, 300), wherein the controller has a control motor (120, 220, 320) and at least one control transmission (130, 230, 330). The control transmission here is designed as a reduced planetary gear transmission comprising two center gears (131, 132, 231, 232, 331, 332) and a planetary gear carrier (233, 333, 433) having at least two planetary wheels (238, 338) and is arranged coaxially with respect to the control axle.
