Abstract (en)
[origin: WO2010022838A1] The invention relates to a device for aligning containers (1) comprising at least one detection system (7). In order to be able to apply identically orientated and aligned labels even to containers without embossings, the invention proposes that at least one detection system (7) is configured as a cover detection system (7) and is disposed so that a closure element (4) disposed on the container (1) can be detected.
