Abstract (en)  
[origin: WO2010037148A2] The invention relates to a refrigerating appliance, comprising a refrigerating chamber (1) for goods to be refrigerated, a housing (2) receiving the refrigerating chamber (1) at least partially, at least one door (4) which is provided on a housing opening (3) of the housing (2), can be moved with respect to the housing (2) and provides access to the refrigerating chamber, and further comprising a door attachment (7) which is provided between the door (4) and the housing (2) and includes an opening device (8) having a rocker lever (14) for moving the door (4) about a tilting axis (9), particularly a horizontal tilting axis, from a closed to an opening position (10, 11). In order to create advantageous design conditions, it is proposed to equip the door attachment (7) with a carrier (15) which is connected to the rocker lever (14) and in particular adjoins the rocker lever (14), wherein said carrier carries at least part (16) of a further opening device of the door attachment (7) for moving the door (4) from a closed position (10) into an open position (18) which differs from the open position (11) of the other opening device (8).
