Abstract (en)

[origin: WO2010037634A1] The invention relates to an electrical device having a support frame and having components to which high voltage can be applied and which are held by the support frame. The electrical device according to the invention is characterized by especially low manufacturing costs of the support frame. For this purpose, the support frame comprises at least one support element made of fiber-reinforced plastic to which at least one component is fastened in an electrically insulated manner, wherein the support element is designed as a beam.
