Abstract (en)

[origin: EP2330040A1] The method involves fixing a blank with the help of a vacuum sucker (16). A gripping- and folding tool (15) is driven from below against the clamping wings. The clamping wings are erected and pivoted upwards with the help of the gripping- and folding tool so that a retaining film reclines loosely. The gripping- and folding tool executes a lifting movement. The loose retaining film is lifted with the help of another vacuum sucker (22) so that a free space (4) develops between the blank and the retaining film. An independent claim is also included for a device for executing the filling and dispatch finishing method of fixation packaging.
