Abstract (en)
The container (10) has a ventilation unit for ventilating a household waste storage tank (14) and activated by a motor, and a ventilation opening (20) formed in an openwork side wall (19) of the container. Holes are formed in the wall to form an air orientation unit that orients intake and outgoing air in a predetermined direction, towards ground. The orientation unit is provided with an air extraction ball (22) and is arranged remote from the height at which a head of an individual is found at the proximity of the container. The wall and the ball are covered with a protective equipment (24). The opening is protected by an active carbon filter.

Abstract (fr)
Le conteneur (10) pour la collecte de déchets ménagers comprend une cuve (14) de stockage des déchets ménagers et des moyens (22) de ventilation de la cuve de stockage (14).
