Abstract (en)

[origin: EP2330066A1] Amount is fixed to an upper port ion of a car. The mount includes a pair of receiving portions arranged at an interval in a horizontal direction. Further, a cleat device is held on the mount. The cleat device includes: a hanger member including a pair of opposed portions individually inserted below the respective receiving portions, the hanger member being capable of being displaced in an up and down direction with respect to the mount; a pair of urging bodies individually arranged between the opposed portions and the receiving portions, the urging bodies urging the opposed portions and the receiving portions in such a direction as to resist displacement of the opposed portions and the receiving portions in a mutually approaching direction thereof; and a shackle arranged between the receiving portions and connected to the hanger member. The car is suspended by suspension means connected to the shackle.
