Abstract (en)

A mobile filling unit for filling containers (8), such as drums, IBC's and the like, from an external source, comprises a vehicle (1,2) provided with transport means (7) which extend between a feed position (5) and a discharge position (6) of the vehicle. The transport means furthermore defining a filling position with a filling installation (10) for filling at least one container at a time, and containment means (7) at the filling position for collecting spilled material. In a preferred embodiment, a scrubber (14) for removing fumes which are released as a result of the filling process is provided as well. Thereby, any fumes which escape as a result of the process of filling can be fed into the scrubber (14) so as to collect and dispose these.
