Abstract (en)
[origin: WO2010026234A1] The invention relates to a vacuum cleaner (10) comprising a dust collection container (11) and a suction head (13) that can be placed on the dust collection container (11), said head having at least one suction assembly (18, 19, 20) that is in fluid connection with the dust collection container via a suction air inlet (30) and is in fluid connection with a suction air outlet (89, 91) via at least one suction air outlet channel (49, 56) in order to form a suction air stream. To develop the vacuum cleaner (10) so that it emits the least noise possible, according to the invention at least one baffle element (61, 64) is situated in at least one suction air outlet channel (49, 56), said element allowing the suction air stream to be deflected in the vertical direction.
