Abstract (en)
[origin: WO2010023027A1] The invention relates to a power tool gear device having at least one first and one second gear stage (12, 14, 12a, 14a), and having a switching element (16; 16a) that can be moved by an operator via an actuation element (18; 18a), wherein the switching element (16; 16a) at least partially surrounds at least one gear (12, 14; 12a 14a) in at least one operating position along a circumferential direction (20; 20a), and is provided for switching between a first and a second operating position. The switching element (16; 16a) comprises at least one first component (22; 22a) and a second component (24; 24a).
