Abstract (en)

[origin: WO2010034363A1] The invention relates to a method and to a device for combined production and filling of containers (1) made of plastic, particularly of plastic bottles (1). Each container (1) is thereby first produced by a thermal forming process. The container (1) is then transferred to a filling device or filling machine (3) and cooled during said transfer. The container (1) is filled with a product medium in the filling device (3). According to the invention, the container (1) is cooled during the transfer by applying a spray mist (8).
