Abstract (en)
[origin: WO2010020866A2] A roofing system (1) for a roof (2) including panels (3) made of copper arranged in use adjacent to one another in a direction of extension of a pitch (4) of the roof, and at least one dismantlable jointing device (14) including: a first longitudinal side (10) and a second longitudinal side (11), opposite to one another, of the adjacent panels (3); a plurality of brackets (15) engaging by snap action in a number of points (P1, P2) the first and second sides (10, 11) of each pair of adjacent panels (3), which are coupled by superposition; and fastening means (16) for fastening the brackets to the pitch; each bracket has a fastening portion (20) and a clamping portion (21), which has a concave profile towards the pitch and extends in cantilever fashion from the fastening portion (20) in a direction perpendicular to the sides (10, 11) of the panels, which are delimited one by an edge (40) bent to form an L, which can be inserted in use in the concavity of the clamping portion (21), and the other by an elastically deformable open box section (44) within which the brackets (15) are housed, said box section being delimited by an edge (46) bent towards the inside and as far as underneath the clamping portion (21) and pinched between the latter and the first side (10).
