Abstract (en)  
[origin: WO2010037757A1] The invention relates to an actuation unit of a moving part (1) of a motor vehicle, in particular a rear hood (1), comprising an actuation part (10) that is fastened to a housing part (20), at least two conductor elements (21) disposed on the housing part (20), an elastically deformable contact element (22) that cooperates with the conductor elements (21), a plunger (11), which is disposed at the actuation part (10), for deforming the contact element (22). According to the invention, the actuation part (10) and the housing part (20) delimit an internal space (2) that is totally closed off from the environment (3), and the actuation part (10) is mounted pivotably about an axis (4) that runs axisymmetrically with respect to the internal space (2).
