Abstract (en)

[origin: EP2332660A1] The device (10) has a positioning and moving mechanism (40) for positioning a support plate (14) and a guide (20) one with respect to another. The mechanism moves the plate and the guide one with respect to another between inactive and active positions of the device. The plate and the guide are moved away from each other to install a window (12) on the plate or to remove the window from the plate, in the inactive position. The plate and the guide are opposite to each other to guide a degreaser liquid type fluid application tool on the window immobilized on the plate, in the active position.
