Abstract (en)
[origin: CA2723253A1] The invention relates to a seat belt webbing comprising: - a plurality of warp threads (1, 3), - a weft thread (2) which runs from one edge of the seat belt webbing to the other edge periodically reversing the direction in reversal points and is interwoven with the warp threads (1, 3), wherein - the weft thread (2) in the reversal points in an edge portion (B) is folded back forming a loop, and - a catch thread (5) which is fed through the loops of the weft thread (2), characterized in that - the catch thread (5) is placed between the warp threads (1, 3) and is covered by the weft thread (2) and/or by the warp threads (1, 3) towards the surface of the seat belt webbing.
