Abstract (en)

The device has a receiver provided with a discharge pipe, and drain units (2, 13) provided with an inlet opening. The drain units are inserted into the receiver. The drain units are provided with a thin bed flange (20) rotated at the inlet opening. The thin bed flange extends from the drain units perpendicular to a region of the inlet opening. The drain units have a pipe support that is connected with the inlet opening in a fluidic manner. A drain opening is provided at a lower end of the drain units. A lip sealing of elastomer is provided at an outer side of the pipe support.
