Abstract (en)  
[origin: EP2333178A1] The tape has an elastically-resilient foam strip (2) comprising side surfaces (6) and transverse surfaces (8, 9) connecting the side surfaces. A film-type casing (4) partially surrounds the strip, and a strip-like element (10) has high bending resistance than the strip, where the element is arranged in an area of a cross-section of the strip. A section (24) of the casing is arranged between one of transverse surfaces of the strip and the strip-like element. A fastening unit (18) for fastening the strip-like element to a component is arranged in an area of a side of the strip-like element.
