Abstract (en)  
[origin: EP2333184A2] The device has a foamed wall brick (3) comprising two foamed parts (4, 5) for accommodating two cold and hot water supply lines (1) and a drain pipe (2), respectively. One of the parts has two accommodators (6) into which the other part is alternatively insertable. The foamed parts are assembled with a groove-spring connection between the accommodators and the latter part, where the connection forms a guide (7). A securing element secures opposite storage of the foamed parts, and the former part is formed by an H-shaped base body.
