Abstract (en)

A flashing member, having a flange sealing the joint of a structure penetrating the roof, wherein an arm (5) of the flange element adjacent to the building structure has incisions, generally perpendicular to the external edge of the arm (5), constituting fixing elements (6). The fixing elements together with the adjacent incisions (k) have an equal width (l + 2k) and are arranged along the edge of the arm (5). Connecting two neighboring members (4) of the flange consists in joint bending of the overlapping fixing elements (6).
