Abstract (en)

[origin: EP2333198A1] The device has a cover element (10) for partial covering of an insulating material chamber (31). A filler is provided for introducing the blow-in insulating material in the insulating material chamber. The cover element is provided on the side with an air-permeable membrane (12), where the side faces the filled insulating material chamber. The filler is arranged in an opening of the membrane. A layer is made of fluorocarbons, particularly polytetrafluoroethylene. An independent claim is also included for a method for blowing blow-in insulating material, particularly cellulose, in insulating material chambers from building panels.
