Abstract (en)

[origin: EP2333223A2] The window (1) i.e. house roof window (2), or door, has a moveable leaf (3) comprising a seal (6) for sealing with respect to a frame (4) of the window or the door. The seal is held in a direction of a longitudinal extension at the leaf in a movable manner. The seal is formed as a partially circumferential seal. The seal has seal sections (10, 11, 16, 21) attached to a side of the leaf. The seal sections are welded with each other in a corner area. A self-moveable holder is formed by a seal base resting a retaining groove of the leaf. The seal is made of elastic material.
