Abstract (en)
An automatic transaction apparatus includes: a console display section that displays a screen that guides a client to perform an operation required to select a transaction and make a transaction and the like; and a data reader that takes a transaction medium of the client, which is inserted through a medium insertion/discharge port, and that reads data from a magnetic stripe formed at the transaction medium, wherein a length of an end of the transaction medium, which projects from the medium insertion/discharge port when the transaction medium is discharged, is controlled to be a length that is greater than or equal to a minimum length required for the client to draw out the transaction medium with fingers and that is smaller than or equal to a thickness of a skimming device which is attached to the medium insertion/discharge port.
