Abstract (en)

[origin: WO2010023157A2] The invention relates to a cabin (1) for accommodating passengers and/or goods, with an opening (2) and with a holder (32) fastened to the cabin (1) for holding a glazing unit (3) in the opening (2), wherein the cabin (1) comprises at least two connection members (4) which each comprise a first fastening part (43) connected to the glazing unit (3) and a second fastening part (42) connected to the cabin (1). Here, the glazing unit (3) is secured in the region of the opening when the glazing unit (3) has detached from the holder (32). The glazing unit (3) can, for example, be pressed out of the holder as a result of persons carried in the cabin (1) violently pushing or striking the inner side of the glazing unit (3). However, the connection member (4) prevents these persons from falling downwards out of the cabin (1). The glazing unit (3) is also prevented from falling. As a result, the safety of the passengers and/or goods in the cabin (1) is ensured.
