Abstract (en)

[origin: WO2010026335A1] Method for detecting the differential expression of a set of molecular markers associated with Parkinson's disease. The subject matter of the present invention is a method for detecting the differential expression of a set of molecular markers which is associated with the presence of or with the risk of developing Parkinson's disease, and in particular a sporadic form of this disease. The subject matter of the invention is also a kit or pack for implementing this method.
