Abstract (en)
[origin: WO2009136784A1] The invention relates to a device for generating energy, comprising: a frame with at least two floats for positioning the device on a body of water with a flow under the frame, and with a span structure on the floats, and at least two blade wheels under the span structure which are connected individually or in combination via at least one shaft to at least one generator in, at or on the frame, and the blades of which extend at least partially into the body of water.
