Abstract (en)

[origin: WO2010043671A2] A hollow mold (7) for preparing ice pieces (1), in particular in an automatic ice maker, has an open top side and a base (8) that is continuously curved between two opposing edge points (13, 14) of the top side in an intersecting plane perpendicular to the top side. The radius of curvature of the base (8) decreases monotonically along the intersecting plane from one of the edge points (13) to the other edge point (14).
