Abstract (en)

[origin: EP2335504A2] The substrate (1) has a textile layer (3) with an internal surface that is coated with a set of points (5) of the adhered material, to present the adherence on the body part of a user, where the textile layer is formed of knit fabric , woven material or nonwoven material. The internal surface of the textile layer is coated with another set of points (6) of the thermofusible product. The melting temperature of the thermofusible product is lower than the melting temperature of the adhered material. The former set of points has an elongated stick shape and a smooth external surface. Independent claims are also included for the following: (1) a band associatable by lamination to a clothing article (2) a method for manufacturing a substrate for maintaining a clothing article on a body part of a user.
