Abstract (en)

[origin: EP2335883A2] The frame (10) has a handle frame part (20) movably supported with respect to a base frame part (30) between a transport position and an operating position (B) by two bearings (51, 52). The handle frame part comprises a handle section (22) that grips the frame in the transport position. The handle section is connected with the base frame part in the operating position by a handle fastening device (70) i.e. plug-in connection device, which is arranged at a distance to the bearings. The handle section forms a support (26) for supporting a machine tool (80) on a ground (U).
