Abstract (en)

[origin: EP2335927A2] The method involves adjusting a printing ink transferring to form cylinders (6-9) using set temperatures of two parameters of the printing ink, where the set temperatures are preset at an outer surface of a roller and the cylinders, respectively. The parameter preset at the outer surface of the roller is referred to viscosity, and the parameter regulated at the outer surface of the cylinders is referred to adhesiveness. The set temperature at the outer surface of the roller is adjusted independent of adjustment of the set temperature at the outer surface of the cylinders.
