Abstract (en)

[origin: EP2335996A1] The coupler (1) has a coupling rod (10) connected with a carriage body of a vehicle. A front end area of the rod lies opposite to a carriage body sided end area. A front coupling rod section (11) is connected with a rear coupling rod section (12). One of the rod sections comprises a spherical type head-piece (13) at an end area that faces the other rod section. The latter rod section has a retainer (14) that is designed complementary to the head-piece at another end area that faces the former rod section, where the head-piece is held in the retainer.
