Abstract (en)

[origin: EP2336037A1] The device (1) has rollers (13, 14) provided for package materials (11, 12). A transport path (15) from one roller to a package group (2) on a conveyor (5) is attached to a separation device (17). Another transport path (16) from another roller to the package group is attached to another separation device (18). The package materials are produced in the separation devices with respect to form and sizes. The package materials are differentiated in functionalities and consist of polymer materials. The conveyor moves objects (3) in a transport direction (T). The separation device is formed as a laser-cutting device and a die cutter. An independent claim is also included for a method for packing of objects.
