Abstract (en)

[origin: EP2336041A1] The stackable transport- and storage container is made of plastic and has an extraction opening, an extraction opening flap (100) and an extraction opening hinge. The extraction opening hinge has hinge axes, gear elements (108,110) and a connecting element (104). The extraction opening flap is connected with a container wall (102) by the connecting element. A Radio-frequency identificationchip is arranged in one of the hollow chamber profiles. Independent claims are also included for the following: (1) a stackable transport- and storage container system with an upper area and a lower area; and (2) a method for manufacturing a stackable transport- and storage container.
