Abstract (en)

[origin: EP2336427A2] The connecting element has hood parts that are connected with each other in a transverse direction and provided with an outer contour of concrete guiding walls (10, 14). Reinforcement elements are arranged at roadway-inner sides of the hood parts. The reinforcement elements are extended in a longitudinal direction and cover the adjacent concrete guide walls. The reinforcement elements exhibit a half-ring cross section that is opened in a direction of the inner sides. The reinforcement elements are installed into grooves of one concrete guiding wall (14).
