Abstract (en)

[origin: EP2336456A1] The platform (6) has a cover element (12) i.e. roller-shutter or cover, rolled up at horizontal axis (11), where the axis is positioned along a transversal side (3) of a basin. A tank beam (8) is provided with connection unit for connection with a water supply source. The beam presents a longitudinal axial opening through which the water contained in the beam escapes by overflow by forming a water curtain to fall on the element scrolled under the curtain at the time of phases of unfolding and/or rolling up of the element around the axis along a longitudinal front face.
