Abstract (en)

[origin: US2010018965A1] The invention relates to a method for producing a round container and to a round container configured for said method, which provide faster construction of the round container, mostly independent from the precision of the preliminary work in spite of high final precision, and which provide simple transportation of the components to the construction site. This is accomplished by the invention through setting up wall profiles (2), which are continuous over the wall height of the round container (1) and which have in particular a flat inner surface, continuously along the circumference and by connecting them with one another and with the subsurface in particular through bolting.
