Abstract (en)

The sill (10) is horizontally oriented and pivotably mounted, where the sill is controlled by pivoting movement of a pivotable window (14) arranged above the sill. Horizontal relocatability takes place by a sliding longitudinal guide between the window and the sill. A transverse guide is provided for variable positioning of the sill in a transverse direction. The pivoting movement of the window takes place by a servomotor. The sill is made up of wood, plastic, metal or stoneware. The servomotor receives a position signal by a sensor arranged at the window.

Abstract (de)

Die Erfindung betrifft eine Fensterbank insbesondere Innenfensterbank welche waagrecht ausgerichtet, zum Aufstellen von Gegenständen geeignet und schwenkbar gelagert ist, wobei diese durch die Schwenkbewegung eines oberhalb der Fensterbank angeordneten Fensters gesteuert ist.
