Abstract (en)

[origin: EP2336705A1] The holder (3) has an actuating element (12) operatable from both sides of a gripping piece (1) of a handgun. A spring element (11) restores the actuating element in a middle position, and has latching elements (16) for snapped engagement into locking grooves of an ammunition magazine (2). The latching elements are formed as latching edges at two curved holding side pieces (15) of the spring element. The actuating element has openings (22) for passage of the latching elements, and is releasably connected with operating parts (13) that are made of plastic.
