Abstract (en)
[origin: EP2336982A1] The device has a recess (13) arranged at a housing (10), and a flexible key element (31) that is accessible from outside, where the key element is accommodated in the recess. The key element exhibits a contact unit that is aligned to an interior of the housing for activating an electrical component. A support is arranged for retaining the key element in the housing. The support and the key element are designed in different materials e.g. silicone or thermoplastic plastic, and form a common assembly component, which is fastened to the housing in a form and/or force-fit manner.
