Abstract (en)

[origin: EP2337050A1] The device (1) has an electronic module comprising a mechanical selector (16) that is moved between a position and another position. The electronic module has a switch (SW1) activated by the selector, and another switch (SW2) e.g. dome or contact switch, activated only when the selector is in the latter position. The latter switch is activated by a mark or groove and a pin (166b) that are accessible only when the selector is in the latter position. The selector has a deformable elastic part that is positioned opposite the latter switch only when the selector is in the latter position.
