Abstract (en)

[origin: EP2337161A1] The arrangement has a sealing device (10) for sealing electrical lines (2), and an elastic sealing element (25) with an opening through which the electrical lines are passed. The electrical line at an outer circumference is arranged in sealing contact with the sealing element. Another sealing element receives the former sealing element and is formed as an elastic element with a passage opening (14). The passage opening and another passage opening are provided for passing the electrical lines. The passage openings exhibit different dimensions.
