Abstract (en)

[origin: WO2010034915A1] The invention relates to a dispenser for precut wiping materials stored in cardboard cassette packaging, characterised in that the dispenser comprises a common casing system (1) capable of receiving two packaging boxes (B1-B2) having a different configuration enabling a different upper and lower outlet from the dispenser of the strip for material being pulled so as to be cut, in combination with two types of lids (C1-C2) fitting onto said casing, and in that said lids are also adapted so as to fit the two boxes and enable the outlet of the material strip to be cut at different locations of the dispenser, and in that the combination of the shapes of the casing (1), of the shapes of the packaging boxes (B1-B2) and of the shapes of the lids (C1-C2) is the only one enabling the dispensing and separation of the wiping material strips at the desired size.
