Abstract (en)

[origin: WO2010046875A2] The invention relates to a rotating electrical machine (1) to be connected to a polyphase power grid, comprising: a polyphase synchronous motor (10) comprising a rotor (11) with permanent magnets (12) and a polyphase asynchronous motor (20) axially coupled together, and a switching system arranged so as to: - electrically connect the asynchronous motor (20) to the grid during the machine starting phase in order to bring the synchronous motor (10) to a speed that enables the motor to operate while connected directly to the grid and, - electrically connect the synchronous motor (10) to the grid during a subsequent phase.
