Abstract (en)
[origin: EP2338652A1] A razor 10 comprises a handle 12, a shaving head 14 which extends from the handle and a blade cartridge 16 which is releasably mounted to the head permitting limited pivotal movement of the blade cartridge. A pressurised canister 24 containing a shaving preparation is located inside the handle. The shaving head defines internal flow passages 42, 46 for conveying shaving preparation from the canister. The razor includes a manually operated delivery mechanism for delivering shaving preparation to the internal flow passages. The blade cartridge comprises a housing having a number of blades mounted therein in an arrangement wherein an internal chamber is defined within the housing at an inner side of the blades. The razor includes two flexible pipes 82.1, 82.2 for conveying shaving preparation from the passages 46.1, 46.2 to the internal chamber of the blade cartridge where the shaving preparation is pressurised before flowing through spaces between the blades onto a surface to be shaved.
