Abstract (en)

[origin: EP2339225A1] The light emission arrangement (1) is provided with point shaped light sources (2) arranged inside hollow body, which has a shape of a rotational ellipsoid-half shell. The light sources are designed in such a way that the light emitted from each light source is emitted in the direction of the center of the rotational ellipsoid. The optical units (10) are formed to divert the light from the light sources in such a way that it is emitted parallel to the rotational axis of the hollow body.
