Abstract (en)  
Object of the invention hereof is a heating element (1) for room heating comprising an emitter (11) capable of yielding heat to the room wherein is located and an electric resistance (2) of the type comprising an outer tubular element (21) housed in a seat (111) of said emitter (11); the electric resistance is kept in operating position through interference coupling between said outer tubular element thereof (21) and said seat (111).
