Abstract (en)

The invention concerns a method for pairing and bidirectional communicating a remote control with one or more motors paired therewith. The motors operate a roll-down blind, roller shutter, roller gate, awning, sun blind or similar closing means following instructions received from the remote control. The consequence that is given to the receipt of a roller motor identification at pairing is transmitted from the motor to the remote control. This can be a refusal signal or an acceptance signal. The operations of the motor are readable on the remote control.
