Abstract (en)
[origin: EP2339602A1] The device has a fiber optic cable (11) firmly or detachably connected with a housing cover (2). An inner contour of the fiber optic cable is adapted to an outer contour of a push-button (4) such that the push-button is completely or sectionally held at the inner contour of the fiber optic cable during axial motion in a guided manner. A trough (22) is processed at a front side (18) of the fiber optic cable. An inner contour of the trough is adapted to an outer contour of a light unit (6) i.e. LED. The LED is inserted into the trough and is completely or sectionally enclosed by the trough.
