Abstract (en)

[origin: EP2339700A1] The connector (1) has a contact arranged in interior of a tubular housing, and a rotatable sleeve arranged at an outer circumference of the tubular housing. The rotatable sleeve is rotated at a preset angle with respect to the tubular housing. A contact unit stays in contact with a complementary connector bushing (8). The contact unit has projections at the outer circumference or at an inner circumference of the rotatable sleeve. The contact is formed as a flat spring and arranged parallel to a longitudinal axis of the tubular housing.
