Abstract (en)

A test point adaptor (1) for coaxial cables. The test point adaptor may comprise a main body (2) having a longitudinal axis with a first end (3) comprising a first interface (4) and a second end (5) comprising a second interface (6) and a first center conductor (7) extending at least from the first interface to the second interface. Further, the test point adaptor may comprise a test body (11) having a longitudinal axis arranged laterally to the main body. The test body comprises a first test body end (13) and a second test body end (14) comprising a third interface (15), and an electrically conductive contact member (20). The contact member is in electrical contact with the first center conductor so as to allow rotation of the main body relative to the first center conductor.
